

2011 Domestic Violence Density Per Square Mile: This map of the Colorado Springs metro area shows the density of domestic violence cases (arrests) for the 2011 calendar year for the City of Colorado Springs and the surrounding unincorporated areas. It does not include data for the City of Fountain or the City of Manitou Springs. The areas of no color represent the lowest density of 0-5 domestic violence cases per square mile. The yellow to dark orange colors represent areas of increased density, capped by the highest densities of 80-86 cases per square mile, as seen near the intersection of Academy Boulevard and Airport Road. The thick dark gray and light gray lines show the areas of high (greater than 100 referrals per square mile) and moderate (greater than 75, but less than 100 referrals per square mile) DHS referral density, as seen on the "2011 Referral Density Per Square Mile" map. Also included in the map are two graphs showing the monthly distribution of domestic violence and child abuse for the 2011 calendar year. The domestic violence data was provided by the Colorado Springs Police Department and the El Paso County Office of the Sheriff. The founded allegation data was provided by the El Paso County Department of Human Services.
